GROW MY TREE

Tree Certificate

EURO FLIGHT TEST GmbH

planted **480 Trees**

and neutralized **~10.560 kg CO_2**

14893967 - #S1008

Planting trees is an effective and sustainable means in the fight against climate change. Trees absorb CO_2 while releasing oxygen at the same time. The tree provides a habitat for animals and ensures healthy soil.

Every tree can absorb ~22 kg of CO_2 per year to fight climate change - Year by year. All our plantings are fair, sustainable and certified. By working with Grow My Tree, you plant trees where the social, ecological and economic impact is the greatest:

1. The **social** level: We support local communities and particularly empower women. We work with local partners in countries of the Global South to plant trees at scale, for reasonable costs, and with an ethical codex.

2. The **ecological** impact is highest, when a great number of trees can be planted and permanently protected based on a given sustainability budget. Due to lower wages and costs for land in the reforestation areas, this is given especially in countries of the Global South, where equally the social leverage is comparably high.

3. Together with our partners, we plant trees where poverty is very high, so that local communities can be strengthened through long-term employment and income opportunities. This serves the **economic** leverage.

Our methodology is based on the idea that sustainable development can only be achieved through the simultaneous and equal implementation of environmental, economic and social goals.

The tree certificate confirms your contribution to climate protection through CO_2 compensation.
